

Module 2: A+ Peripherals and Power Supply

DAY 5:-

Task 1:

OS Name	Microsoft Windows 11 Pro	OS Version
Version	10.0.26200 Build 26200	
Processor	Apple silicon, 2000 Mhz, 2 Core(s), 2 Logical Processor(s)	Processor
Installed Physical Memory (RAM)	4.00 GB	
Total Physical Memory	3.99 GB	RAM
Available Physical Memory	790 MB	
Total Virtual Memory	5.37 GB	
Available Virtual Memory	2.17 GB	

Task 2:

Task 3:

Task 4:

Task 5:

Installation of Windows 10

Step 1: What You'll Need

- A laptop compatible with Windows 10
- A USB flash drive (8 GB or larger)
- A Windows 10 ISO file

Step 2: Create a Bootable USB

- Plug the Rufus-created USB into the laptop where you want to install Windows 10.

Step 3: Boot from the USB

- Restart the laptop.
- Press the boot menu key repeatedly (commonly **F12**, **F9**, **F11**, **Esc**, or **Del**, depending on the manufacturer).
- Select your USB drive from the boot menu.

Step 5: Start Windows Setup

When the installer loads:

Choose:

- Language

- Time and Currency
- Keyboard layout

Next → Install Now

Step 7: Select Windows Edition

Choose the edition that matches your license:

- Windows 10 Home
- Windows 10 Pro

Click **Next**.

Step 8: Accept the License

Check:

I accept the license terms

Click **Next**.

Step 9: Choose Installation Type

Select:

Custom: Install Windows only (advanced)

This allows partition management.

Step 10: Partitioning Tips

Option A: Clean Installation (Erase Everything)

Delete every partition on the target drive until it becomes **Unallocated Space**.

Select the unallocated space.

Click **Next**.

Windows automatically creates the required system partitions.
